

The Learning Equation

The Learning Equation's conceptual emphasis encourages students to learn math skills in context. Offering many real-life examples in addition to skill-building tutorials at every level of developmental math, TLE's highly developed graphics program and visual appeal keeps students interested and engaged in learning math. Many students agree that using TLE builds their math skills and encourages them to take control of their own learning.

Students speak about their experience with using The Learning Equation:

"(I liked) being able to work at my own pace and spending more time on the chapters which were harder for me."

"I have taken a (traditional class) before and failed. This time I feel that I am walking away with a better understanding of algebra."

"I liked the way I can work at my own pace."

"(I liked that the course) was self-paced, (the) website (was) excellent for explaining how to do problems."

"The course material was clear and concise...I appreciated being able to go at a pace comfortable for my schedule."

"It was a good refresher for the next level of math."
